

2
This is how the
Plant looks when
you pass by only
there is several
other buildings.

2
The Cafeteria is on
top of the white building.

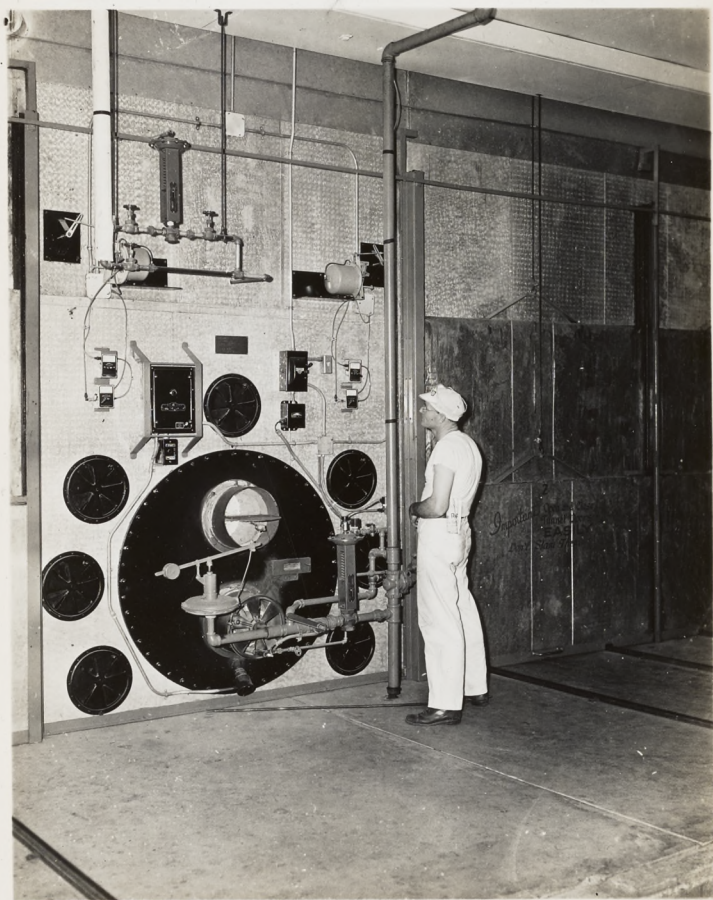

This is where
they are getting the
Cabbage out of the
field. ²¹² Some of these
Cabbage weigh twelve
and fifteen pounds.
They get very heavy
if we have large
ones all day.

This is called
the trimming room
and is where I
work. This is a
picture of the night
crew. That is the
foreman and floor
lady standing on
top.

This is another picture of the trimming room. only shows them working on both sides of the belt. The belts both move all the time. We work on both sides all the way around, but this picture was made before they got the back all finished. It's a very big room and about 150 girls work here.

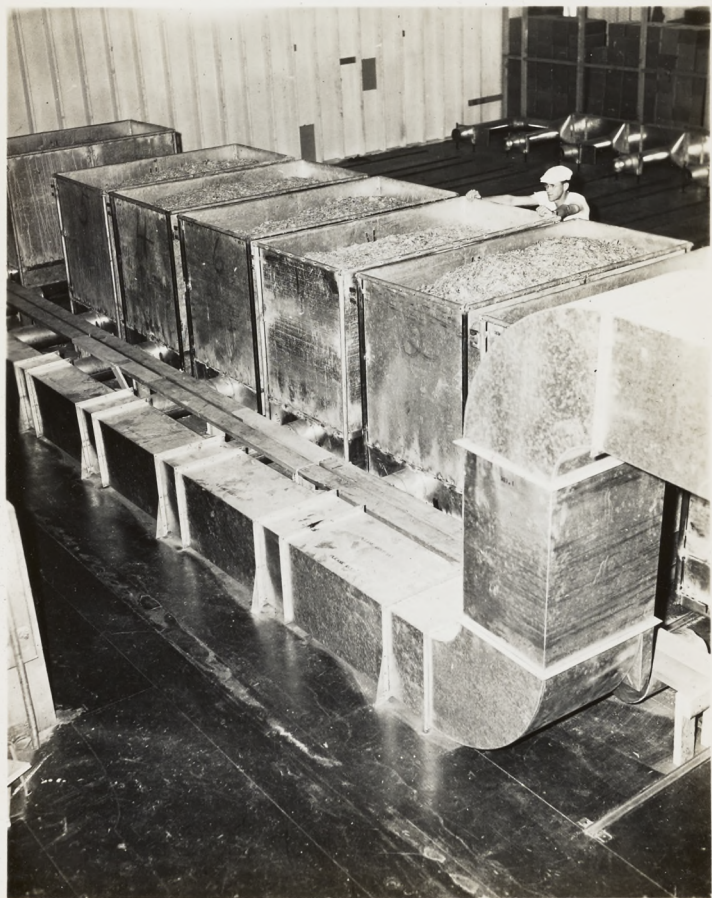

This is the Tunnel
where the Cabbage
are dried. Burnice
works here about
half of the time.
When he doesn't
work in the ware
house

This is called
betraying. Taking
'em off the trays
after they come out
of the tunnels. The
girl at front is ailing
trays before they put
em back in the
tunnels again. It
is really hot here.

This is where
they are put in
bins before canning
em. Burnice has
worked here too.

a different place
but the same as
the other picture.

This called the
finishing belt. where
they pick all the
bad Cabbage or Cores
on any thing that isn't
good.

I worked here a
little while, but it's
hot and smells like
a hatchery to me and I
got sick and haven't
gone back any more.

This is where they
fill the Cans ready
for shipping. Burnie
works up here some
weighing Cans after
they are filled they
are suppose to weigh
exactly 14 pounds.

This is it half
of it, but maybe
it will give you
a little idea what
it is.
